

Abdul Rehman Baig

Full-Stack Developer · React.js · React Native · Next.js · MERN Stack

+92 332 760 2633 | rehmanbaig456@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full-Stack Developer with 1+ year of production experience building and shipping cross-platform applications across the React Native and MERN stack. Contributed to apps now installed by 500K+ users globally and earned Top Performer recognition at HZTech within 8 months of joining. Owns the full delivery cycle — from sprint planning and API integration to App Store and Play Store release — inside a 5-person engineering team. Currently pursuing a BSc in Software Engineering at the University of Karachi.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Dart, HTML5, CSS3

Frontend: React.js, React Native, Next.js, Tailwind CSS, Framer Motion

State Mgmt: TanStack Query (server state), Zustand (UI state), React Context API

Backend: Node.js, Express.js, REST API Design

Databases: MongoDB, PostgreSQL, Firebase Firestore, Prisma ORM, SQLite

APIs: Facebook Graph API, Instagram Graph API, Google OAuth 2.0

DevOps/Tools: Git, GitHub, Xcode, Postman, Vercel, App Store Connect, Google Play Console, VS Code

Architecture: Component-driven development, MVC, Monorepo structuring, OOP

EXPERIENCE

Junior React Developer · HZTech

Feb 2026 – Present

- Deliver features across 7 concurrent products — 4 React Native mobile apps and 3 React.js web apps — owning UI implementation, REST API integration, and production bug resolution from sprint kick-off to release.
- Execute the React Native build and distribution pipeline via Xcode and Android tooling, publishing to the App Store and Google Play Store with zero rejected submissions across all client apps.
- Built and maintain a shared component library consumed across multiple projects, reducing duplicated UI code and cutting ramp-up time for new feature workstreams.
- Manage state architecture using TanStack Query for server-state synchronisation and Zustand for local UI state, keeping components predictable and API calls non-redundant.
- Collaborate directly with designers, QA, and the product manager to scope, estimate, and deliver features on schedule across simultaneous client engagements.

React Developer Intern · HZTech

Oct 2025 – Jan 2026

- Shipped production-ready React.js components during a 3-month internship — work merged into live client codebases — with the role converting to full-time at period end.
- Integrated REST API endpoints into frontend views, adding error boundary handling and loading-state feedback that improved perceived data-fetch reliability across assigned modules.
- Followed the team's Git branching strategy and PR review process from day one, closing assigned tickets independently without escalation throughout the internship.

PROJECTS

Mathani — Quran, Prayer & Alarm App — React Native · iOS & Android

[Google Play](#) | [App Store](#)

- Reached 500K+ installs on Google Play with a 4.4-star rating across 439 reviews — live on both platforms serving a global audience.
- Resolved a complex rendering problem by presenting each Quran page as sequenced line images, achieving smooth, flicker-free scroll across all 604 pages on low-end Android hardware.
- Engineered 5 self-contained modules from scratch: Quran reader, multilingual Tafseer & Translation (API-driven), Recitation audio player, Prayer alarm scheduler, and a Daily Challenge system.

- Wired a streaming REST API for on-demand Tafseer and Translation content, implementing request caching and offline-graceful error fallback to sustain usability under poor network conditions.
- Managed the complete release pipeline on both App Store Connect and Google Play Console — code signing, provisioning, metadata, and phased rollout — clearing first-submission approval on both platforms.

PostAutoPilot — Social Media Automation Platform — *Next.js · React Native · Web & Mobile*

[Web App](#) | [Google Play](#) | [App Store](#)

- Designed and launched a multi-platform social media scheduling tool — Next.js web app and React Native mobile app — deployed simultaneously on Vercel, the App Store, and Google Play.
- Wired the Facebook Graph API and Instagram Graph API to handle OAuth account linking and enable direct cross-platform post publishing from a single interface.
- Structured the frontend data layer with TanStack Query for server-state management and Zustand for ephemeral UI state, eliminating redundant network calls and keeping component logic clean.
- Configured the project as a pnpm-managed monorepo from day one, aligning dependency versions across web and mobile workspaces and reducing cold-install overhead.
- Owned all three production deployments end-to-end — Vercel, App Store, and Google Play — without DevOps support, handling build config, signing, and store submissions independently.

Full-Stack E-Commerce Platform & Admin Dashboard — *React.js · Node.js · Express.js · MongoDB*

- Built end-to-end: JWT authentication, product and inventory CRUD, order lifecycle tracking, and an admin analytics dashboard — deployed on Vercel and Render.
- Modelled the MongoDB schema to support multi-product orders and inventory state without data redundancy, keeping queries lean at the application layer.

EDUCATION

BSc Software Engineering · University of Karachi (UBIT)

Jan 2024 – Expected 2027

Relevant coursework: Data Structures & Algorithms, DBMS, Operating Systems, Artificial Intelligence, Assembly Language

Intermediate Pre-Engineering · Adamjee Government Science College

Completed 2023

CERTIFICATIONS

- React Native — Meta (Coursera)
- MERN Stack Development — Saylani Mass IT Training (SMIT)
